1. PROJECT DESCRIPTION

The planning consultant will complete Ramah WSD Water Supply and System Improvement Preliminary Engineering Report, which includes planning needs for the Ramah Water and Sanitation District. The community has had major difficulties with its well and thus delivery of water to the community. Work to include two sections of information and include two other processes and components:

1. To communicate and involve the Ramah Water & Sanitation District in the planning process.
2. To present to the Board of Commissioners, Ramah WSD Board of Directors, and to the public a completed draft of the "Ramah WSD Water Supply and System Improvement Preliminary Engineering Report".
3. The first section of the plan will include for the project:
 - a. A needs assessment;
 - b. Preliminary Engineering Report as per requirements of NM Local Government Division and NM Environment Department; and
 - c. An asset management plan and operations & maintenance plan for the system.
4. The second section of the plan will also provide project specific planning needs, for instance, well site selection, site evaluation, hydrological investigation, water hookup options with other providers and/or sources, and land negotiations.

The individual project description is as follows:

Ramah WSD. The town of Ramah is a small, rural community in McKinley County. According to 2000 US Census, estimated per capita income was \$10,419, 167th in the state (McKinley County has the lowest per capita income in the State). The water and sanitation system is substandard. Some pipes are up to 50 years old, and the pipes at some fire hydrants are 2" diameter.

Ramah WSD has been issued several violations for water quality over the past 5 years. All of our wells are in low-lying areas that are susceptible to flood damage. Ramah WSD has developed an Infrastructure Capital Improvement Plan (ICIP). This project is the first phase in implementing the ICIP. This project needs to perform hydrologic studies and formulate a PER to determine feasible water system improvements. This PER will examine the installation of new well(s) drawing from a deeper aquifer, existing source treatment, storage, and replacement of existing conveyance mains. The purpose of developing new well sources is to provide reliable safe drinking water to the community, which includes 130 residential connections and two schools which serve the wider outlying areas of McKinley and Cibola County (396 students).

Capital improvements anticipated from the PER include: (1) additional source development; (2) existing source rehabilitation; (3) potential water treatment for above listed contaminants; (4) water storage and distribution (some pipes are as old as 50 years); (5) fire protection (some lines that lead to the fire hydrants are 2" lines, and none are larger than 4"); (6) improved storage capacity; (7) diurnal equalization; and (8) standby.

The Directors of the Ramah WSD realize the importance of complying with all State and Federal regulations on water quality, fire safety, and health issues..
